	<b>INSTRUCTIONS</b>	

**Thermostat Setting :**

The freezer and refrigerator thermostats automatically regulates the inside temperature of the compartments. By rotating the knob from position 1 to 5, colder temperatures can be obtained. “0” position shows thermostat is closed and no cooling will be available.

**Thermostat knob position;**

**0 :** The appliance is switched off.

**1-2 :** For short-term storage of food in the freezer compartment, you can set the knob between minimum and medium position.

**3-4:** For long-term storage of food in the freezer compartment, you can set the to medium position.

**5 :** For freezing the fresh food. The appliance will run colder temperatures.

**Freezing with Super Freeze (SF button)**

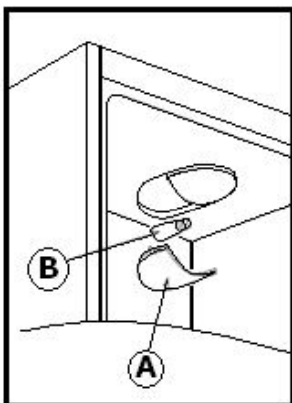

Press the SF button, the freezer will start to run continuously with maximum performance (observe that the SF lamp will light on prange when you turn on the SF button) The freezer temperature will decrease and the appliance will switch to the lowest temperature. Place the food to be frozen quickly inside the freezer, preferably in the top drawers. Once the food is frozen, you must turn off the SF button and set the thermostat knob to desired position.

**Display Panel :**

**Alarm light :** Lights red, when the temperature rises to a critical point in side the freeze.

**Power light :** Light green automatically, when the appliance is connected to the power supply.

**Super freeze light (SF light) :** Lights orange, when the SF button is turned on.

**Replacing the refrigerator lightbulb :**

- 1- Unplug the unit from the power supply.
- 2- Remove the refrigerator light cover (A) by pressing the hooks placed on both sides of the cover.
- 3- Change the light bulb (B) with a new one (not more than 15W)
- 4- Place the light cover in its place and plug the unit.
